

2025 PROJECT ROADMAP

Q-SENSE IS EASY

Plug. Play. Sense.

PROJECT OBJECTIVE

OBJECTIVE #1: SMARTER CONTROL

ASD fixtures enhanced with pre-set sensors for motion and daylight

OBJECTIVE #2: HIGH EFFICIENCY

Every system is designed for maximum savings and reliability

OBJECTIVE #4: READY TO GO

We handle the data, configuration, installation plan and final setup

OBJECTIVE #3: TURNKEY SIMPLICITY

From layout to handoff, Q-SENSE is fully prepared before it reaches the jobsite

OUR GOAL: Deliver a complete lighting system that installs fast, saves energy & runs smart — all powered by **Q-SENSE**

01 DATA & REQUIREMENTS

Before anything starts, we gather **the essentials:**

-  Dimensions of each space (Length, Width, Height)
-  Desired light levels (brightness, hours & control type)
-  Existing fixture layout or Site Limitations

Then we divide the area into zones like office, warehouse, outdoor, parking, each with its own fixture and control needs.

IN SHORT:

We design around how the space is actually used

02 ANALYSIS & CALCULATIONS

LIGHTING CALCULATIONS

Our team calculates how many fixtures and sensors are needed to achieve **the perfect lighting balance.**

- Determines light levels for every zone
- Selects fixture types and counts
- Confirms sensor range & brightness
- Verifies results before the first install

The math is done up front so installation is fast and predictable

03 SENSORS & ZONING

Each project is divided into control zones that match how people use the space.

-  Choose sensors that fit the environment: office, warehouse, or outdoor
-  Group fixtures into zones for easy control
-  Add Q-Batteries where backup is needed

ZONES SIMPLIFY CONTROL AND KEEP EVERYTHING OPERATING AS INTENDED

04 HOW IT WORKS

Every component – fixture, sensor, EM kit — gets a **Unique ID Tag**.

- Clear labeling makes setup simple
- Plans show exactly where each piece goes
- No confusion, no mix-ups on site

WHEN IT'S LABELED,
IT'S EASY TO INSTALL

DEVICE LABEL LEGEND

MARKING	MEANING
Z#	Zone number
G#	Group number within the zone
F#	Fixture number matching the number on the layout
S#	Sensor number matching the fixture number on the layout
EM#	EM-kit number matching the fixture number on the layout

Example: Z3/G1/S03 means: Zone 3/Group 1/Sensor 03

05 PREPARATION & SETUP

Before shipping, each zone is **packaged** and **prepped**:

Pre-configured sensors with correct settings

Labeled boxes by zone for quick ID

Checklists and guides included in every box

Everything arrives ready for fast, accurate installation

Zone 1

Zone 2

Zone 3

06 INSTALLATION

Installers simply match labels.
NO Programming, **NO** Guesswork.

Mount fixtures and screw in sensors

Verify brightness and detection

Complete Zone checklist

**PLUG IN, POWER UP,
AND THE SYSTEM WORKS**

SUPPORT

ONCE INSTALLED, MINIMAL ADJUSTMENTS ARE NEEDED

A complete, supported
SOLUTION
from **FIRST LIGHT**
to **FINAL SIGN OFF**

ASD LIGHTING CORP

- ✓ Pre-Configured
- ✓ Pre-Labeled
- ✓ Pre-Set to perform

Plug. Play. Sense.
